

## **Error: "Database connection information not accessible"**

## **Error: "... OCE not Found .."**

### **User Experience**

A locally saved query file gets an error above and processing is disabled.

### **How to Solve this Problem**

1. If you have permission to change the OCE file for your report, please reference the IMS RPT Connection ODBC file again and save your bqy.

**Or**

2. Your locally report is referring to the ims\_rpt OCE, this file no longer exists in Hyperion 11. Please download the IMS RPT Connection ODBC file located in the Database Connection File Folder. After you download it refer your local BQY document to the new OCE and save.
