

Menus are out of place or not aligned or now visible

User Experience

In your workspace your menus are showing up at various places, overlapping each other, sub menu not showing, or do not show at all. EEOC security limitation to the browser causes some rendering issues. See below:

How To Solve This Problem

You must use Internet Explorer for full compatibility at the moment.

Please download the **Training Guide PDF** file at the login screen and perform the browser prerequisite section. This section involves adding the bi.eoc.gov to your intranet or trusted sites.
