

In Hyperion How Do I Export More Than 65,000 Rows to Excel?

User Experience

In Hyperion 11 when you export a **Table** or a **Result Sets** to excel format it is limited to only 65,000 rows. Your data results have more than 65,000. How can fix Hyperion so that I can export more than 65,000 rows?

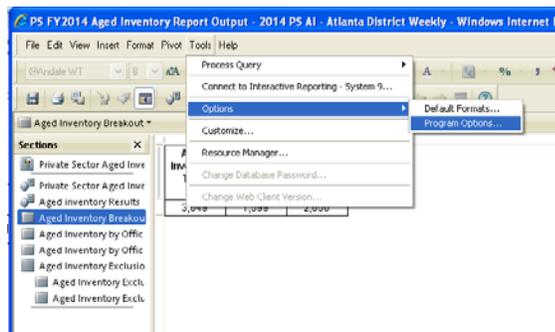

How To Solve This Problem

If you are exporting in **Interactive Web Client** you may increase the max rows in excel by doing the following:

1. Know your limitation of the version of excel you are using. Currently EEOC is using office 2007 which has a maximum row of 1,048,576 rows and 16,384 columns support. Reference: <http://office.microsoft.com/en-us/excel-help/excel-specifications-and-limits-HP010073849.aspx>

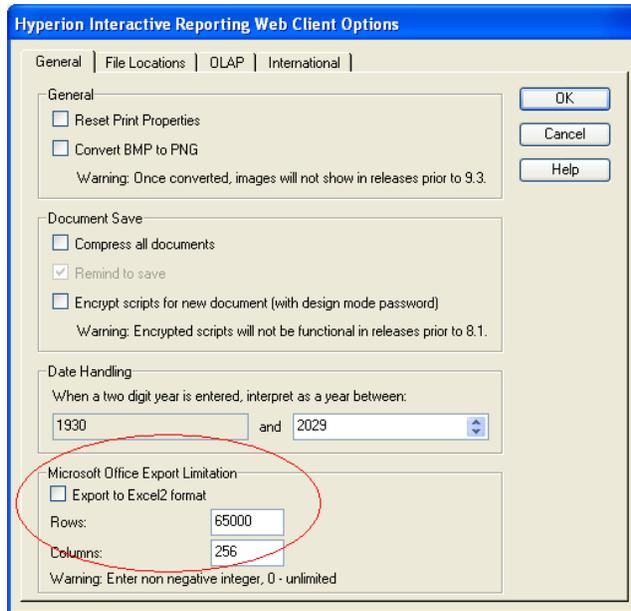

Note: You may find out your Microsoft Office limitation from Microsoft web site.

2. Before you export go to **Tools Menu**
3. Select **Options**
4. Select **Program Options**

Go to next page ...

5. In the **Program Options**, under the **General Tab** go to the **Microsoft Office Export Limitation**.

6. Set the Rows to your desire increase. **Beware of your software limitation.**
7. Set the columns to your desire increase. **Beware of you software limitation.**
